BAUMA CHINA 2026
PRESS RELEASE

Combining Global Expertise with Local Commitment in China

The FAYAT Group is continuously committed to the road and street road life cycle, with innovative and sustainable equipment solutions, for road construction, maintenance, cleaning, rehabilitation and urban job sites, combining safety, sustainability, performance and local expertise to support customers globally.

With a strong manufacturing presence of 30 factories around the world, with its world-renowned expert brands, FAYAT demonstrates its long-term knowledge and commitment to customers. This approach brings together international expertise and a deep understanding of local requirements, delivering solutions designed to meet the evolving needs of the road industry.

In China, FAYAT focuses on three key priorities: **strengthening local manufacturing capabilities, investing in local operations and infrastructure, and developing products in China, for China.**

FAYAT – SAS with a capital of €120,000,000

STRONG MANUFACTURING PRESENCE IN CHINA

Three production sites to serve domestic and international markets

A strong local manufacturing presence is central to FAYAT's strategy in China.
By developing industrial capabilities close to customers, the Group aims to respond more effectively to local market requirements while combining the advantages of local operations with the expertise of its international brands.

INVESTING IN CHINA

The FAYAT Group regional commercial and logistics hub

FAYAT's presence in China extends beyond manufacturing, with a commercial and logistics hub serving both the local market and the wider Southeast Asian region. This strategic position strengthens the Group's ability to support customers, streamline distribution and respond efficiently to the needs of different markets. Through its road equipment brands, FAYAT combines local capabilities with regional reach, reinforcing its long-term commitment to China and Southeast Asia.

PRODUCT DEVELOPMENT IN CHINA, FOR CHINA

Leveraging local R&D capabilities to meet customer needs

Understanding local operating conditions and customer expectations is essential to developing solutions that deliver real value. Through Fayatec China, its advanced R&D capability centre in China, FAYAT combines the expertise of its international brands with a focus on local application requirements, helping develop equipment suited to customers' projects, production needs and working environments, supported by technical expertise and customer support.

At **Bauma CHINA 2026**, the FAYAT Road Equipment brands – **BOMAG, Dynapac and Marini** – will showcase equipment and technologies that translate the Group's strategic priorities into practical solutions for customers. The exhibition will feature six premieres, highlighting FAYAT's commitment to innovation, electrification and advanced recycling technologies, with a particular focus on solutions developed to meet the needs of the Chinese market.

SIX PREMIERES: INNOVATION IN COMPACTION, PAVING AND ASPHALT RECYCLING

BOMAG BW 138ADe – All-electric tandem roller

BOMAG will present the BW 138ADe, a new all-electric tandem roller designed to bring zero-exhaust-emission operation to professional asphalt compaction. Its electric drive combines low-noise operation with the benefits of emission-free working on site, making it particularly suitable for urban construction, residential areas and other noise-sensitive environments. By reducing noise and eliminating exhaust emissions during operation, the BW 138ADe responds to the growing demand for more sustainable construction equipment, particularly in densely populated areas. The machine represents a further step in BOMAG's development of electrified solutions for road construction, combining environmental considerations with the operational requirements of professional contractors.

FAYAT – SAS with a capital of €120,000,000
137 Rue du Palais Gallien – CS 22093 – 33081 Bordeaux Cedex
Ph. +33 (0)5 56 00 21 00 – Fax +33 (0)5 56 51 60 47 – info@fayat.com – www.fayat.com
RCS Bordeaux 595 750 589 – NAF 7010 Z – EU VAT No. FR 07 595 750 589

BOMAG BM 2000/68 CL – Large cold planer

BOMAG will present the **BM 2000/68 CL**, a large cold planer designed for demanding road milling and rehabilitation projects. With its 2-metre milling width, the machine combines high-performance material removal with precision and productivity, making it suitable for major road construction and infrastructure works. It further strengthens BOMAG's offering for efficient and reliable pavement rehabilitation.

BOMAG BM 500/10 CC – Compact cold planer

The BM 500/10 CC brings precision milling capabilities to smaller construction sites and restricted working environments. Designed for road surface rehabilitation and asphalt removal, this compact cold planer combines manoeuvrability with accurate milling performance, making it suitable for urban applications and maintenance projects where working space is limited. Its compact configuration allows contractors to address a wide range of milling tasks while complementing the capabilities of larger machines. The BM 500/10 CC demonstrates BOMAG's approach to providing versatile equipment solutions for different scales of road maintenance and rehabilitation.

Dynapac SD1800We – Electric compact asphalt paver

Dynapac will introduce the SD1800We, an electric compact asphalt paver developed for urban road construction and medium-sized paving projects. Combining electric technology with flexible paving capabilities, the machine is designed to address the specific requirements of urban worksites, where noise levels, emissions and accessibility are increasingly important considerations. Its compact configuration supports operation in different site conditions, while its electric drive contributes to reducing the environmental impact of paving activities. The SD1800We reflects Dynapac's commitment to developing paving technologies that combine operational flexibility, efficiency and the advantages of electrification.

Marini FRT240-HAG30 – High-capacity RAP recycling with Double Counterflow technology

Marini will showcase the **FRT240-HAG30**, a new high-capacity RAP recycling solution developed by Marini China's R&D team, combining Marini's core technologies with European expertise, including Ermont's experience in counterflow systems.

At its core is **Double Counterflow technology**, which uses evenly distributed hot air to heat reclaimed asphalt pavement (RAP) without direct flame contact. This controlled process ensures uniform heating, helps preserve bitumen properties and enables RAP discharge temperatures of 150°C to 180°C, with incorporation rates of up to 100%.

FAYAT – SAS with a capital of €120,000,000
137 Rue du Palais Gallien – CS 22093 – 33081 Bordeaux Cedex
Ph. +33 (0)5 56 00 21 00 – Fax +33 (0)5 56 51 60 47 – info@fayat.com – www.fayat.com
RCS Bordeaux 595 750 589 – NAF 7010 Z – EU VAT No. FR 07 595 750 589

Available in single and dual counterflow configurations, the FRT240-HAG30 offers recycling capacities of up to 210 t/h and 420 t/h respectively. Its integrated layout, multi-fuel burners and Cybertronic 500 automatic control system further enhance operational efficiency, flexibility and process control, making it a powerful solution for high-percentage asphalt recycling for efficient and reliable pavement rehabilitation.

OTHER EQUIPMENT ON DISPLAY

Alongside the five premieres, the FAYAT brands will present additional solutions covering the full range of road construction applications, from compaction and paving to milling and asphalt production.

BOMAG will also display the **BW 203 AD-4 CL** articulated tandem roller, the **BF 900 C-3 L** asphalt paver equipped with the **S 600 screed**, capable of paving widths of up to 10 metres, and the **BW 226D-5 CL** single-drum soil compactor, designed for the Chinese market and compliant with China IV emission requirements. Together, these machines demonstrate BOMAG's capabilities across urban roadworks, major infrastructure projects and demanding earthworks.

Dynapac will showcase further solutions for paving and compaction, including the **MF2500CS IMIX** mobile asphalt feeder, the **SD2500CS PROTAC** highway spray paver, the **CC6200 VI** heavy tandem vibratory roller and the **CC4200C** combination roller. These machines demonstrate Dynapac's focus on consistent material supply, pavement quality, effective compaction and operational efficiency across different construction applications.

Marini will complement its two major innovations with further solutions from its asphalt production portfolio. The **Class Tower Pro and Master Tower** showcase advanced batch production technologies, combining high performance, energy efficiency and RAP incorporation capabilities. The **Ermont Magnum** 160/140 i represents the company expertise in continuous production, while the **Marini Xpress 2000** offers a mobile batch plant solution designed for rapid installation and flexible deployment. From advanced recycling to batch, continuous and mobile production, Marini's portfolio meets a broad range of customer needs and operating requirements.

Together, the equipment and technologies on display demonstrate how FAYAT's brands address the diverse needs of the Chinese road construction market, from urban applications to major infrastructure projects, with solutions designed around productivity, quality, resource efficiency and the practical requirements of local customers.

CONCLUSION

At Bauma CHINA 2026, **BOMAG, Dynapac and Marini** will demonstrate how FAYAT Road Equipment combines international expertise with local commitment to support the development of China's road construction industry.
Through strong manufacturing capabilities, continued investment in local operations and product development focused on customer needs, the Group aims to deliver solutions that combine safety, sustainability, performance and local expertise. From compaction and paving to milling and asphalt production, its portfolio the diverse requirements of road construction, maintenance, cleaning, rehabilitation and urban job sites while supporting customers in improving operational performance.
FAYAT's commitment to China goes beyond presenting advanced equipment. It reflects a long-term approach built on local capabilities, close customer relationships and solutions designed around the evolving needs of the market. Bauma CHINA 2026 will provide an opportunity to discover how this approach contributes to the future of road construction in China.

ABOUT FAYAT

The FAYAT Group, French and family-owned, operating in 170 countries thanks to the dedication of more than 23,000 employees, provides innovative and sustainable solutions to its customers all over the world in the 7 major activities where it has developed: Civil Works, Foundations, Building, Energy Services, Metal, Pressure Vessels and Road Equipment. In 2025, the Group achieved turnover of €5.9 billion.
